

# Blue Horizons

## Calc-Chlor Pods 300g

### Key Features

- Stabiliser-free. No cyanuric acid build-up
- High chlorine content – economical
- Sleeved for safer handling & slow consistent release
- Lasts up to 5 days

**Ideal free chlorine range:** 1 – 3mg/l

**Warning: Do not mix neat with any other type of chlorine. Always add to a clean and empty skimmer basket.**

### Application Instructions

1. Maintain pH level within the ideal range of 7.2 – 7.6. If not in this range, adjust.
2. As these stabiliser-free calcium hypochlorite tablets are designed to dissolve slowly, it may be necessary to shock dose the pool water prior to their use to first establish some chlorine more rapidly. Maintain free chlorine level in the range 1 – 3mg/l.
3. If your swimming pool is outdoors, test the stabiliser level and if required, apply Blue Horizons Chlorine Stabiliser to achieve a level of 40mg/l.
4. **Skimmer Application:** Place two Calc-Chlor Pods in a clean and empty skimmer basket per 50,000 litres (11,000 gallons) of pool water.
5. Do not remove the plastic sleeve as this helps to ensure slow, consistent chlorine release.
6. Once the Calc-Chlor Pod has dissolved, the plastic sleeve will float and can be removed and discarded. Each pod lasts up to 5 days, dependent on water flow.

**Caution:** Blue Horizons Calc-Chlor Pods are not suitable for chlorine feeders/dispensers.
