

# Installation instructions for CoverGuide, The leading edge

Manufactured by Intopool Direct Ltd

Thank you for purchasing our high quality CoverGuide. If you follow the instructions below, installation should be straightforward.

Place end of the solar cover between the two sections of mesh up against the welded part.

Insert a screwdriver through each pre-made hole in the mesh and push through the solar cover.

Fit the press fix connectors

Place the black tubular fitting supplied over the press fix connector.

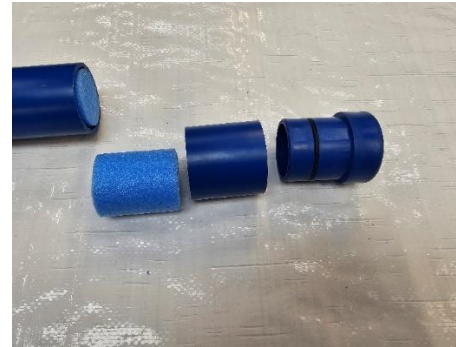

Use a soft hammer/mallet to hit the top to ensure a tight and secure fit of the press fix. Snip off the protruding stalk.

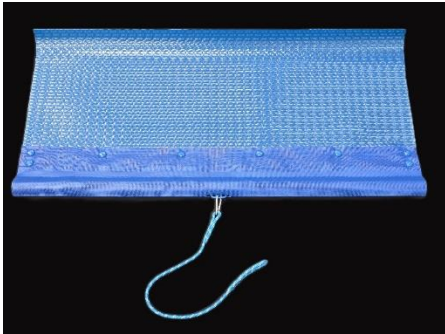

To reduce the length of the mesh, cut an equal amount off from BOTH ends.

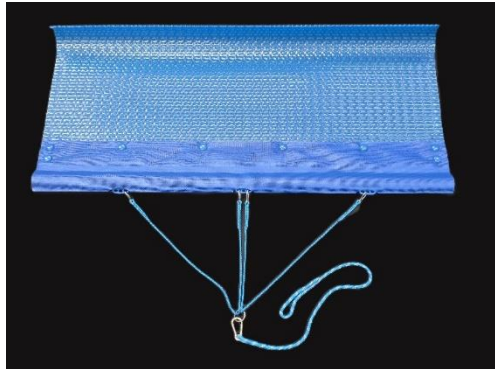

End Cap

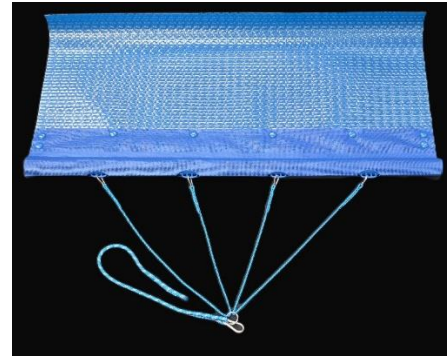

To reduce the length of the rigid pipe section, remove the end cap and cut an equal amount off from BOTH ends of the pipe including the foam inside. If there are ladders on one side of the pool, then just reduce the pipe on one side.
