

Cleanse

Cleanse your body in better feeling water

Cleanse is our deep-cleaning, powerful solution for harboured waste in pipework, and is designed to remove these contaminants from your system. By removing these, your sanitiser is free to perform its primary role.

Step By Step

To be dosed at the start of every 12 week cycle.

1. Remove the filter cartridge from the filter compartment.
2. Ensure the water level is at least 50mm above the jets.
3. Run the hot tub/spa and pour the required dose into the filter compartment.
4. Run for a minimum of 30 minutes.
5. Turn off the hot/tub and spa for 30 minutes.
6. Run the hot tub/spa for a further 30 minutes.
7. Drain the hot tub/spa and using a garden hose wash away any debris from around the shell and jets.
8. Refill with fresh water.
9. Sanitise the hot tub/spa with your chosen disinfectant before re-using.
10. This should be repeated every 12 weeks.

Professional Tips

- Hydro Balance must be used alongside a registered sanitiser.
- Introducing Hydro Balance could not be simpler. Flush and drain with Cleanse and you are ready to go with no need for auxiliary products.
